USCDI+ Cancer Registry Seeks Feedback on Data Element List and Hosts Listening Session

The USCDI+ Cancer Registry use case addresses delays in facilities reporting data to cancer registries. These delays can disrupt the data availability by up to three years. USCDI+ Cancer aims to identify standards for efficiently extracting and collecting cancer registry data directly from EHRs and pathology labs. This helps the Assistant Secretary for Technology and Policy (ASTP) and Office of the National Coordinator for Health Information Technology (ONC) make cancer registry data collection better and faster for early incidence reporting.

Currently, the USCDI+ Cancer Registry is seeking feedback on Data Element List. The feedback is due on Sept 23, 2024, via USCDI+ Platform.

In addition, on August 29, 2:00 – 3:00pm ET, USCDI+ Cancer Registry invites stakeholders to participate in **a listening session** focused on the Cancer Registry use case and USCDI+ Cancer Registry data element list published on July 23rd. This session will provide an opportunity to discuss the importance and ease of collection of the data elements, the potential burden of sharing them electronically, and the impact on the future flow of data as we gather feedback from stakeholders like you. Register here.

NIH Reopens Comment Period for Draft Public Access Policy and Draft Supplemental Guidance

On June 18, 2024, the National Institutes of Health (NIH) published a request for public comments on its Draft Public Access Policy and Draft Supplemental Guidance in the Federal Register. To ensure that all interested parties have the ability to submit comments, NIH is reopening the public comment period. The public comment period will be reopened until **August 30, 2024.** Please use the Comment Form to submit responses.
