AACR Project GENIE

AACR Project GENIE Overview

Who Are We?

- Open Access
- International
- Pancancer Registry
- Real-world clinico-genomic data
- Legal Consortium

The GENIE Advantage

- 10+ Years Experience
- 20 Participating Institutions
- ~265,000+ Patient Samples w/NGS
- ~25k new patients

Growing Utility

- 18 Public Data Releases
- 20,100+ Registered Users
- 1,700+ Total Citations
- As of January 12, 2025

Available Analytes*

*Vary by specimen

- Clinical Data
- NGS
- Digital Pathology
- Radiology
- RNAseq
- ctDNA
- Clinical Tests

AACR Project GENIE is far more than a feat of computational engineering; it is a mission to humanize big data by transforming over 227,000 individual cancer journeys into a collective roadmap for survival. Its impactful data highlighted the harmonized, well-governed sharing leading to meaningfully reusability.

As a premier "learning health care system", GENIE established a vital foundation for clinico-genomic discovery, validation, and collaboration across academia, nonprofit research, and industry. By aggregating and harmonizing data from 20 leading international cancer centers, GENIE provides public data release generated via more than 271,000 samples to research communities, fulfilling a collaborative mandate to ensure that no patient's clinical experience is ever wasted.

The impact of this openness is exemplified by the Biopharma Collaborative (BPC). By linking genomic sequencing with longitudinal clinical data in focused cohorts—such as the Breast v1.0-public dataset of 1,130 patients—GENIE makes the "invisible" visible. These specific cohorts allow the research community to examine off-label targeted therapy utilization and rare mutations that would remain hidden in smaller, isolated institutional pools.

Ultimately, GENIE is the democratization of oncology, where a researcher at a small startup has the same power to turn data into discovery. Through sustained multi-institutional collaboration, common data standards, and thoughtful governance, GENIE helps ensure that shared data can be used responsibly and effectively to advance precision oncology.

Driving Broad Impact of Cancer Research Together: NCI Office of Data Sharing Showcase

Unlock the Power of Partnership with NCI Data Sharing

[Registration.](#)

Date and Time: May 21, 2026, 2:00 – 3:30 PM ET

Speakers: Jaime Guidry Auvil, Director, NCI ODS. Emily Boja, Branch Chief, NCI ODS. Freddie Pruitt, Health Scientist Administrator, NCI ODS. Mousumi Ghosh, Health Scientist Administrator, NCI ODS.

Join the NCI Office of Data Sharing (ODS) for an engaging webinar focused on strengthening collaboration with NCI-Designated Cancer Centers and advancing data-driven cancer research.

Learn how ODS is aligning more closely with investigators and institutions to enhance our shared mission of improving outcomes for patients and families across the cancer community.

In this session, you will explore how to partner with ODS in key areas:

- **Accessing and managing controlled NCI data resources** A pilot approach to institutional oversight and compliance, supporting the responsible use of NCI data across multiple PI-led projects
- **Aligning core data generation laboratories** Efforts to streamline standards, formatting, and submission practices across Cancer Centers
- **Collaborating with institutional data strategists** Bringing together institutional data leaders to develop efficient, high-impact, and NCI-compliant strategies
- **Leveraging multi-modal NCI datasets** Working collaboratively to integrate diverse data types and accelerate discovery across Centers
- **Navigating federal policies and regulations** Guidance on managing, sharing, and providing public access to research outputs, including data, publications, clinical trials, models, and biospecimens

Whether you are an investigator, data strategist, or institutional leader, this webinar will offer practical insights to help you maximize the value of NCI data while maintaining compliance and advancing best practices in data stewardship.

Be part of a more connected, compliant, and data-enabled cancer research ecosystem.

NIAID Blueprint Webinar Series: Improving Impact through Identifiers, Metadata and Citations

NIAID's Office of Data Science and Emerging Technologies (ODSET) invites you to the next NIAID Data Science Webinar: *Improving Impact through Identifiers, Metadata and Citations*. The webinar is delivered by GO FAIR US (GFU), who co-developed [the NIAID Blueprint](#), a minimal set of recommendations to describe, connect, and demonstrate the value of your data.

Presenters: Keith Maull and Matt Mayernik (GO FAIR US) and ODSET

Date & Time: Thursday, April 29th at 12 PM ET/9 AM PT

[Registration.](#)

This webinar will explore the crucial role of identifiers in measuring research impact.

Participants will learn about the ways identifiers are indexed, and metrics, tools and techniques for finding papers that reference relevant datasets and data repositories. We will also introduce strategies for creating citation recommendations that are easy for data users to find and follow. There will be time at the end for discussion.

Please share with your networks -- this webinar is open to the public. A recording and slides will be available after the session. Register with the link below and contact Lisa Mayer at lisa.mayer@nih.gov with any questions or concerns.

Announcement

[Data Management and Sharing Plan Format Page](#)

A new [2026 Pilot DMS Plan format](#) is now available for all competing and non-competing awards.

If you are just starting to prepare your DMS Plan, we recommend using the simplified 2026 Pilot DMS Plan format that is required for applications with due dates on or after May 25, 2026. NIH will accept both the 2023 and 2026 formats for due dates prior to May 25, 2026. While this new version simplifies the format, the spirit of the NIH DMS policy remains. Investigators should still prospectively plan on how to manage and share the data and describe details on anticipated data types and their relevant repositories, data standards, number of study participants, timelines per policy to the best of their knowledge when writing their funding applications. Additional information can be found in the [NIH Guide](#).

We'd love to hear from you! Contact the ODS team at: nciofficeofdatasharing@mail.nih.gov
